Radiator or Pipe Thermometer - Magnetic

P.O Box 25898 Sharjah

United Arab Emirates

This 60mm stainless steel surface dial thermometer incorporates a magnetic sensing pad for mounting on ferrous metals and indicates temperature ranges of 0 to 120°C or 32 to 250°F. This magnetic dial thermometer is commonly used in the central heating and HVAC industries to monitor the temperature of radiators and pipes; it is especially useful when balancing radiator temperatures. The clear, graduated scale on the 50 mm dial face indicates temperature in 2 °C and 4 °F divisions.

Specifications	Details	
Range	0 to 120°C or 32 to 250°F
